The Kostroma breed originated in Russia from a combination of Ayrshire and Brown Swiss traits. These dairy cows often live for 25 years.

Because of their origination in the Swiss Alps, Brown Swiss are tolerant to harsh weather conditions. Their milk is ideal for cheese production.

Typically red and white in color, Norwegian Reds are known for their rich milk and ability to maintain exceptional health.

The Milking Shorthorn is known as one of the most versatile breeds of dairy cows. Average in size, the Milking Shorthorn is one of the oldest dairy breeds.

Slightly smaller than the Jersey, Guernseys produce a golden colored milk perfect for cheese and butter. Guernseys also adapt to any climate.

Originally from the Netherlands, Holsteins produce more milk than any other animal on Earth. Most Holsteins are black and white in color.

Exceptional foragers, Ayrshires developed many of their traits from beginnings in Scotland. Ayrshires are typically red and white in color.
